DETAILED ACTION

Response to Amendment

1. In response to the telephone interview from 7/19/2007, the applicant has submitted an amendment, filed 7/27/2007, amending the independent claims to incorporate the allowable subject matter of claim 8 and all intervening claims and further amending claim 25 to overcome the previous 35 U.S.C. 101 rejection (*Amendment, Pages 9-10*). In response to such amendments, the further examiner's amendment, and for the reasons below, claims 2, 5-6, 8-12, 14, 17-18, and 20-25 are allowable over the prior art of record.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Stanley Ference (*Reg. No. 33,879*) on 8/10/2007.

3. The application has been amended as follows:

Please amend claims 8 and 25 as follows:

8. A method of facilitating speech recognition, said method comprising the steps of:

obtaining speech input data;

building a model for each feature of an original set of linguistic features, wherein the model reflects[[:]] whether or not each feature is present;

ranking the linguistic features;~~and~~;

rebuilding the model for each of a preselected number N of the ranked linguistic features;

and

compiling a confusion matrix for each feature of the original set of features subsequent to said step of building a model for each feature of an original set of features, wherein said compiling a confusion matrix comprises:

computing a score for each feature based on the likelihood of its presence in a frame of the speech input data, and

calculating mutual information between truth and labels for each feature;

wherein the ranking comprises ranking the mutual information calculated in compiling the confusion matrix.

25. A program storage device readable by computer, tangibly embodying a program of instructions executable by the computer to perform method steps for speech recognition, said method comprising the steps of:

obtaining speech input data;

building a model for each feature of an original set of linguistic features, wherein the model reflects[[:]] whether or not each feature is present;

ranking the linguistic features;~~and;~~

rebuilding the model for each of a preselected number N of the ranked linguistic features;

and

compiling a confusion matrix for each feature of the original set of features subsequent to said step of building a model for each feature of an original set of features, wherein said compiling a confusion matrix comprises:

computing a score for each feature based on the likelihood of its presence in a frame of the speech input data, and

calculating mutual information between truth and labels for each feature;

wherein the ranking comprises ranking the mutual information calculated in compiling the confusion matrix.

Allowable Subject Matter

4. **Claims 2, 5-6, 8-12, 14, 17-18, and 20-25** are allowable over the prior art of record.

5. The following is an examiner's statement of reasons for allowance:

With respect to **Claims 8, 20, and 25**, the prior art of record fails to explicitly teach a

method, system, and computer storage device storing a program for creating speech recognition models based on linguistic pronunciation features (*Specification, Page 7*) comprising: obtaining a speech input, building a model for a complete set of linguistic features that indicates whether or not each feature is present, compiling a confusion matrix for each feature by computing a score for each feature based on the likelihood of its presence in a frame of the speech input data and calculating mutual information between truth and labels for each feature (*Specification, Page 9*), ranking the linguistic features based on the mutual information in the confusion matrix (*Specification, Page 9*), and rebuilding a final speech recognition models based on the top-ranking features (*Specification, Pages 10-11*).

Although Kirchoff ("*Robust Speech Recognition Using Articulatory Information*," 1999) discloses a method/system for creating speech recognition models dependent upon articulatory (*linguistic*) features utilizing confusion matrix and mutual information analysis (*Section 3.2.3, Pages 48 and 50-53; and Section 4.1.2, Page 79*), Kirchoff does not explicitly teach or fairly suggest that linguistic features are ranked for rebuilding according to mutual information calculated between truth and labels for each linguistic feature in a confusion matrix, which is complied by computing a score for each feature based on the likelihood of its presence in a speech input frame, as is recited in independent claims 8, 20, and 25.

The dependent claims further limit allowable independent claims 8, 20, and 25, and thus also contain allowable subject matter by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
